Ecosystem-Ready

How Aralia Works

Where Aralia Works

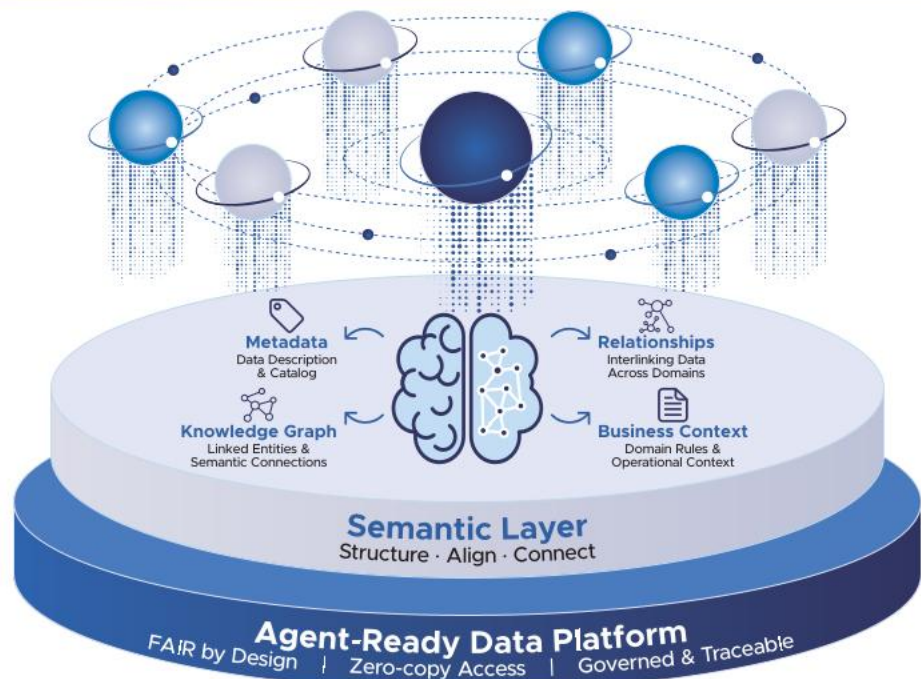

From internal enablement to cross-organization collaboration.

Let AI Agents Act On Your Data. Not Take It.

Aralia structures and governs enterprise data so agents can query, reason, and act, while every team keeps control of it.

Three Value Pillars

Semantic Intelligence

Structured isn't the same as understood. We turn your existing tables into meaning AI agents can act on.

Agentic Readiness

Any AI Agent—Claude, ChatGPT, or your own— connects the same way, through the same governed gateway.

Data Sovereignty

Every team keeps its own data. Agents access it live through governed, permissioned connections—nothing duplicated, nothing exposed.

FAIR DATA RE-ENGINEERING

MCP GATEWAY

DATA PLANETIZATION

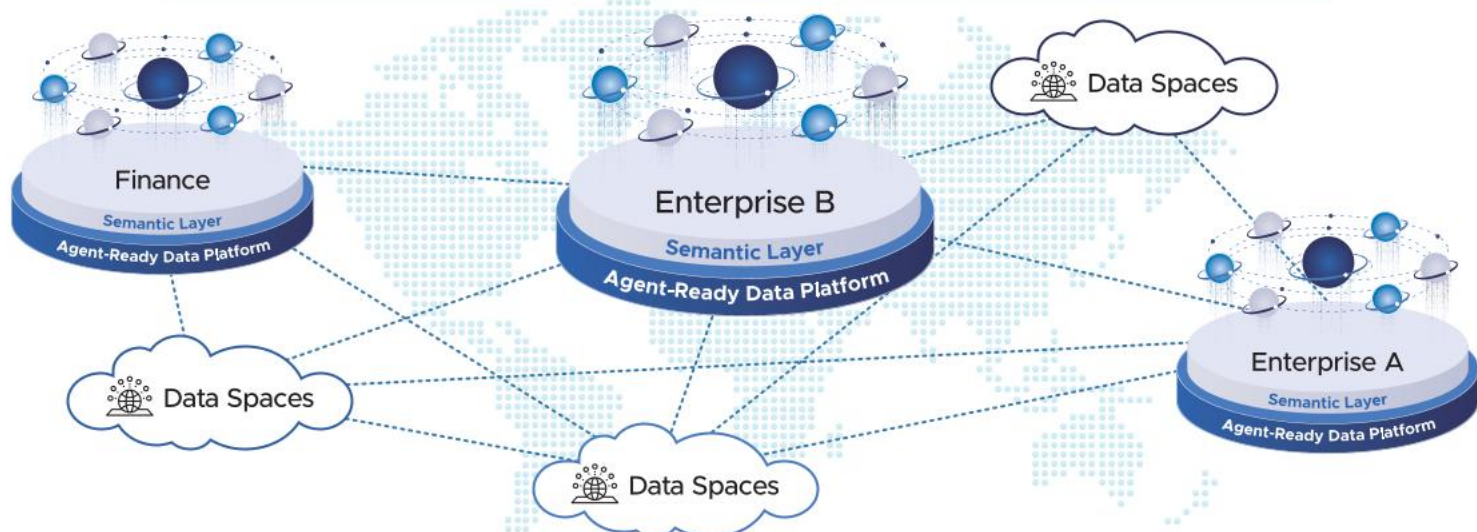

SEMANTIC LAYER

MULTI-AGENT COMPATIBILITY

ZERO-COPY INTEROPERABILITY

Structure Once · Every AI Understand & Act · Without Giving Up Ownership

Scaling into a Global Agent-Ready Data Platform Ecosystem

One-to-Many. Unlock Ecosystem-Wide Value.
Connect Once, Scale Across Agents, Enterprises, and Data Spaces.
